

**“R&D” is the first booster for Steam Torpedo.**

It introduces 10 new compartment tiles to allow you to build new deadly submarines.

The BACTERIOLOGICAL AQUA-GRENADES compartment features a new Attack symbol. Instead of dealing damage on a successful hit, the defender must remove an oxygen token from a compartment in the targeted location. If no compartment in the location has oxygen, the attacker may remove 1 oxygen token from a compartment of his choice.
