Installation Manual

Manfrotto Firmware Update Graphical User Interface

System Requirements

Operating system: Windows XP SP2/SP3, Windows Vista, Windows 7, MAC OS X 10.6.8 or later
Java: JVM 1.6 or later

Description

The Manfrotto Firmware Update GUI is Windows-only software designed to allow the user to upgrade the firmware of relevant Manfrotto products.

Installation

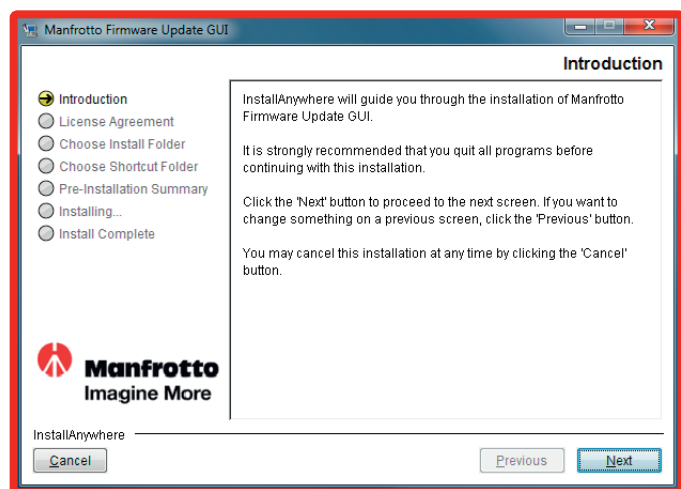

1. run the installation program which will guide you through the process shown below

Please note:

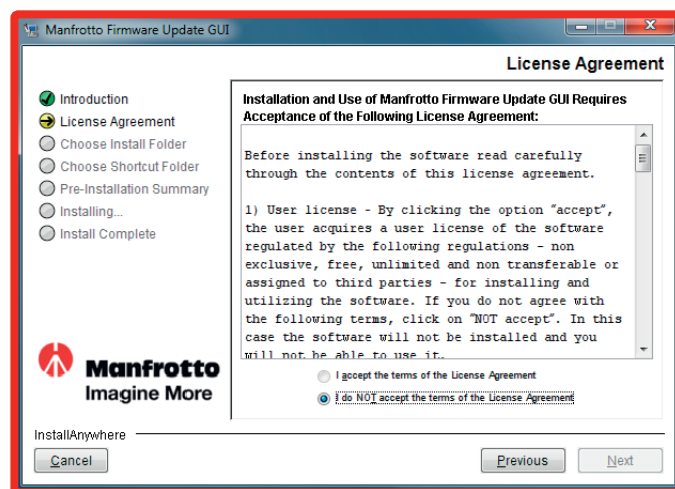

The installation program requires administrator privileges to run properly.

If firewall or antivirus software is running, you may need to check it is not blocking the program.

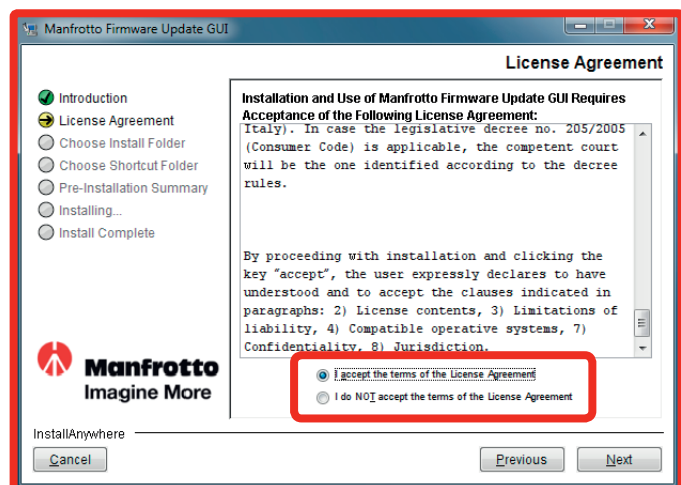

- 2.

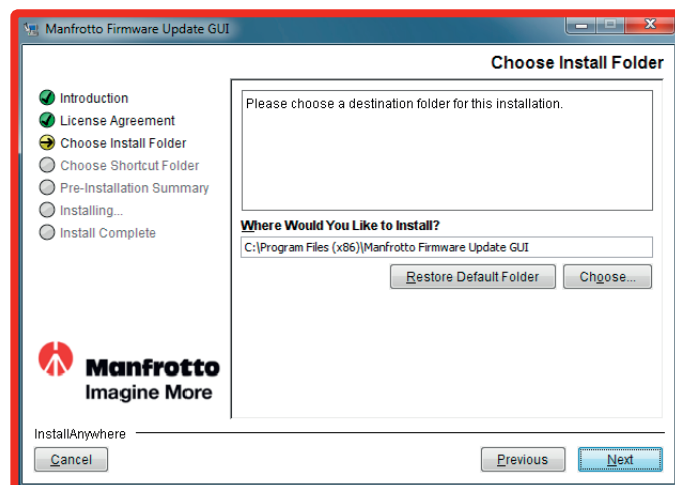

- 3.

- 4.

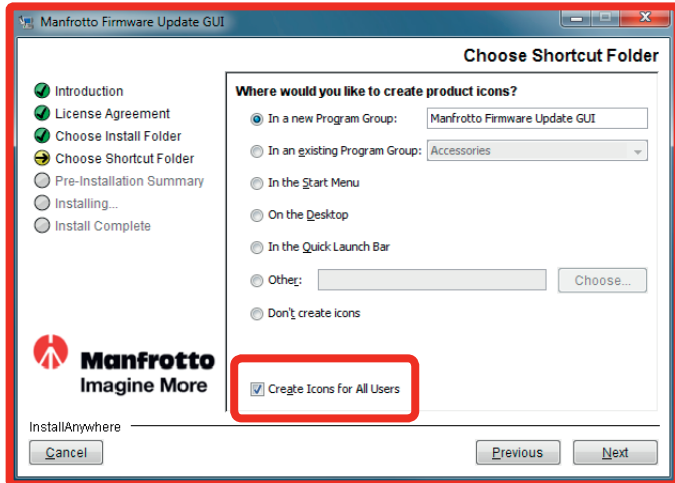

- 5.

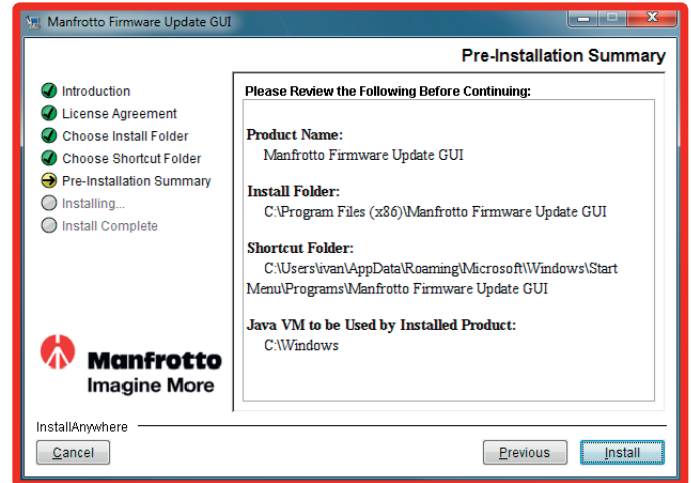

To enable the “accept” option you have to scroll through and read the whole license text

6.

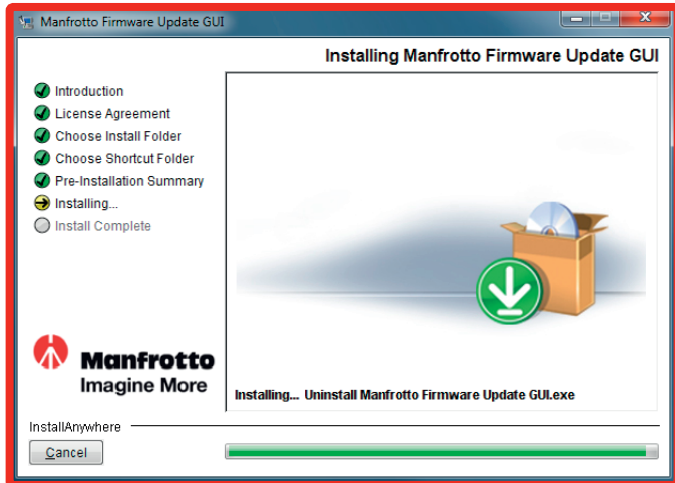

It's normally recommended that you check the "Create Icons for All Users" checkbox, especially if you're installing the software as administrator and want it to be available to all users.
